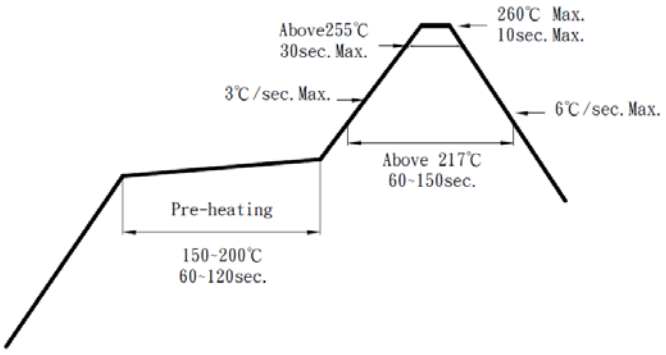
IR-Reflow Soldering



1. Avoid any external stress applied to the resin while the LEDs are at high temperature, especially during soldering.

2. Avoid rapid cooling or any excess vibration during temperature ramp-down process

3. Although the soldering condition is recommended above, soldering at the lowest possible temperature is feasible for the LEDs

IRON Soldering

350℃ Within 3 sec., One time only.

Notes for designing:

Care must be taken to provide the current limiting resistor in the circuit so as to drive the Inhere LEDs within the rated figures. Also, caution should be taken not to overload Inhere LEDs with instantaneous voltage at the turning ON and OFF of the circuit.

When using the pulse drive care must be taken to keep the average current within the rated figures. Also, the circuit should be designed so as be subjected to reverse voltage when turning off the Inhere LEDs.

Storage:

In order to avoid the absorption of moisture, it is recommended to solder Inhere LEDs as soon as possible after unpacking the sealed envelope.

If the envelope is still packed, to store it in the environment as following:

(1) Temperature: 5℃-30℃; Humidity: RH 60%Max.

(2) After this bag is opened, devices that will be applied to infrared refold, vapor-phase refold, or equivalent soldering process must be:

a. Completed within 168 hours.

b. Stored at less than 30% RH.

(3) Devices require baking before mounting, if:

(2) a or (2) b is not met.

(4) If baking is required, devices must be baked under below conditions:

48 hours at 60℃±3℃.
